Methods

- ⊗ 1:1 implementation across every country listed in the United Nations ($N=193$)
- ⊗ Website/article/etc. linked for future reference
- ⊗ Entered into the spreadsheet
- ⊗ Double-checked for each country to ensure quality of database

International 1:1 Project

International 1:1 Project

By EdMatics

INTERNATIONAL 1:1 DATABASE

-The International 1:1 database was developed from a [Center for the Advanced Study of Technology Leadership in Education \(CASTLE\)](#) initiative to see what the entire world is doing in their country-by-country education systems when it comes to providing 1 laptop for every 1 student (1:1). Below is a Google map representing each country with a 1:1 implementation. You can interact with the map by clicking and dragging to a new location or clicking on a yellow marker to see information about the specific country's program.

Total Number of Devices

Percentages of Devices

Internet Access: % of Countries

Let's Look at One 1:1

- ⦿ Country: **United States – Maine**
- ⦿ Started: 2001
- ⦿ 101,000 devices (MacBooks)
- ⦿ 7-12 grades
- ⦿ Funding comes from the state of Maine
- ⦿ Internet Access: Yes
- ⦿ PD for Teachers: Yes – from Apple
- ⦿ PD for Administration: Yes – from Apple

Let's Look at One 1:1

- ❁ Country: **Macedonia**
- ❁ Started: 2007
- ❁ 180,000 devices (Ncomputing - Linux)
- ❁ Every Elementary and Secondary Student
- ❁ Funding comes from Ministry of Education
 - ❁ “Computer for Every Child” Program
- ❁ Internet Access: Yes
 - ❁ 1st country-wide wireless Internet in the world
- ❁ PD for Teachers: Yes
- ❁ PD for Administration: Yes

Let's Look at One 1:1

- ❶ Country: **Argentina**
- ❷ Started: 2007
- ❸ 2,045,254 devices (Classmate PC)
- ❹ Secondary
- ❺ Funding comes from OLPC
- ❻ Internet Access: Yes
- ❼ PD for Teachers: Yes - Intel
- ❽ PD for Administration: Yes - Intel

One Laptop per Child: Disappointing results?

By [Charlie Osborne](#) | April 9, 2012, 5:16am PDT

Summary: *Is the One Laptop per Child scheme producing the results we expected?*

Simply purchasing a device such as a laptop and handing it to a child is unlikely to turn them into the next Zuckerberg. However, it can teach them basic, valuable skills that will assist them when it is time to leave education and support themselves by joining the work force.

At least, this is the view from Peru, where the largest program involving One Laptop per Child, an American charity's scheme currently operates. Active in more than 30 developing countries across the globe, the aim of the project is to provide children with access to a laptop for educational purposes.

However, according to an evaluation of the scheme's success by the [Inter-American Development Bank](#) (IDB), the results may not be as promising as we may have hoped.

Peru is one of the few places that is currently enjoying an economic boom — but it has one of Latin America's lowest-ranking educational systems, which no doubt hampers its economic capabilities in a global setting.

- **Continue updating database through a world-wide collaborative effort**
- **Monitor country-by-country progress over coming years**
- **Develop international partnerships through open-source data**
