industrial hemp pet bedding

Take the drab and mess out of your pet's cage with greenBED Hemp Pet Bedding. Its bright light yellow color creates a dazzling, fresh looking space that both you and your pet will love.

It has all of the natural odor-absorbing benefits of industrial hemp hurd.

greenBED soaks up animal waste and absorbs and neutralizes odors like a sponge. Gone is the drudgery of changing the litter every 2 days!

With greenBED Pet Bedding, one change a week is all it takes to give your pet a comfortable, fresh smelling bed. The clumping feature when wet also makes selective removal of soiled bedding easy.

It is particularly recommended for hamsters, guinea pigs, chinchillas, mice, rats, cage or aviary-birds (such as canaries and parakeets), hens and pigeons but also rabbits, snakes and even short haired dogs.

DIRECTIONS FOR PET BEDDING

Your small animal deserves the best. Here are some suggestions on how to best use greenBED Pet Bedding to maximize your friend's comfort and health:

SMALL RODENT (mice, rats, hamsters, guinea-pigs, chinchillas, rabbits)

Spread 3 to 4 cm of greenBED Pet Bedding at the bottom of your pet's cage (5 to 6 cm if your pet tends to want to create his nesting place (Russian hamster for example)). Change the litter on average once each week (according to the number and the size of your animals).

BIRDS (Canaries, parakeets, parrots, etc...)

Although there are specific cage linings for birds, greenBED Pet Bedding for Small Animals is appropriate for your winged friends as well.

Only birds that often flap their wings (especially if they are large and imposing) are likely to make the bedding fly from the cage, but canaries, parakeets, and even turtledoves and parrots can be accommodated without problem.

greenBED Pet Bedding, needing only to be changed once a week, will save you time and money. One centimetre of greenBED Pet Bedding is enough.

SNAKES

Some snake owners leave their animal in direct contact with glass, metal or wood. This is bad for two reasons: the animal could develop scale problems and cage cleaning and deodorizing every day becomes necessary.

greenBED Pet Bedding has the advantage of absorbing liquid waste very quickly and dries out solid waste rapidly, while retaining and neutralizing odors. Snakes enjoy a layer of bedding 3 to 5 cm thick.

DOGS

Spread 2 to 3 cm of greenBED Pet Bedding in kennel (including the sleeping area).

greenBED Pet Bedding insulates your dog from the cold floor and acts as a comfortable mattress. Waste collection will be easier than ever. Urine odors will be absorbed and neutralized. We advise you to change the litter every 3 to 4 days.

BENEFITS

- Low dust
- High absorbency
- Reduced ammonia smell
- No chemical residues
- No damaging phenols (unlike pine and other wood products)
- Biodegradable and Compostable
- High Porosity

SAFETY

Being made from industrial hemp, greenBED Pet Bedding has natural anti-bacterial and anti-fungal properties. It is also free of the aromatic hydrocarbons (harmful phenols) found in pine and cedar shavings.

The problems with softwood shavings such as pine and cedar stem from the natural, aromatic chemicals called phenols that give the woods their natural aroma.

These phenols interact with the liver and respiratory system in the body, potentially producing unwanted and harmful side effects. Natural chemicals present in softwoods can damage the animal's delicate respiratory tract, leading to chronic respiratory disease and asthma.

Also, keep in mind our pet bedding is produced with material straight from our farmers fields and therefore is free from any industrial chemicals that can be found in many recycled pet bedding material.

ENVIRONMENTAL

Biodegradable and easy to dispose of, greenBED Pet Bedding can be safely composted, incinerated or landfilled.

SIZE

greenBED Pet Bedding comes in two convenient sizes. There are 1.8kg bags as well as 15kg compressed bales for customers requiring more material while taking up minimal space.
