Introduction
The Caregiver Non-Contact Thermometer is the next generation answer to ease of use and patient compliance in clinical thermometry. Simple one button operation delivers a temperature in approximately 1 second without contact to the patient.
Features
Fast measurement that meets ASTM and ISO standards
Simple 1-button operation, no scanning required
No cross-contamination and may be used on sleeping patient
Audible and visual indication of completed temperature
Backlit LCD display and Low Battery indication
Long Battery Life of more than 10,000 temperatures (typical) with Sleep Mode
30-temperature memory recall with date and time stamp
Able to measure temperature of other objects without contact and also room temperature
Measures natural thermal radiation. Does not emit radiation

Intended Use
Caregiver® Professional Clinical Thermometer is an infrared thermometer intended for the measurement of human body temperature in people of all ages without contact to the body and may be used by medical professionals or by consumers in a home environment.

Important Precautions
Read this manual thoroughly prior to using. Use this product only for its intended use.

Caregiver is a precision optical thermometer. Handle carefully and do not drop. Do not use if thermometer has suffered damage.

Insure that sensor end is clean and free of debris. See Maintenance/Cleaning for instructions.

Caregiver is a non-sterile device. Do not use ethylene oxide gas, heat, autoclave, or any other harsh method to sterilize.

Replace protective sensor cap when not in use.

If coming from a warmer or cooler environment or after a period of exertion, allow the patient and thermometer to acclimate to room temperature for 20 minutes prior to taking temperature.

Remove perspiration and excess oil from the forehead as this may affect the accuracy of the reading.
Operating environment is from 50°F to 104°F (10°C to 40°C).

Do not expose to severe environments. Storage temperature is from -4°F to 140°F (-20°C to +60°C).
Do not use in presence of flammable anaesthetic mixtures.

Do not use on patients with scarred tissue or tissue compromised by skin disorders or trauma in the vicinity of the forehead measurement area; patients treated with certain drug therapies that may affect normal body temperature or use on patients while skin is exposed to external sources of heat or cold such as direct sunlight, fireplace heat, cold compress therapies, air conditioner flow, etc.

**Initial Setup**

To remove Battery Cover, press down at the arrow mark and also on the center of the cover, SLIDE it in the direction of the arrow as shown in Figure 1.

Install (2) AA alkaline batteries with polarity as shown in the battery compartment. All LCD display segments will briefly illuminate during self-test, and you will hear a “beep”.

Close the battery cover by pressing down both the arrow mark and the bottom of the cover, SLIDING the cover in the opposite direction of the arrow as shown in Figure 2.

Do NOT press the battery cover to force it closed if the battery cover doesn’t close tight as shown in Figure 3. If this happens, remove the battery cover by SLIDING as described in step 1. Repeat step 3 to close the battery cover tight.

**Caution:** Closing the battery cover by force may damage the battery cover latch and result in battery damage. Always follow the instructions and close the battery cover by SLIDING only.

If thermometer will be stored for a long period, remove batteries.

Body Temperature Measurement

About Body Temperature & Fever

Body temperature can vary from one person to the next and also varies by location on the body and time of day. Temperatures measured from different sites, even at the same time, should not be directly compared. Fever indicates that body temperature is higher than normal. This may be caused by a number of conditions including infection, overexertion, overdressing or immunization. Some people may not experience fever even when they are ill. These include, but are not limited to, infants younger than 3 months old, persons with compromised immune systems, persons taking antibiotics, steroids or antipyretics (aspirin, ibuprofen, acetaminophen), or persons with certain chronic illnesses. Please consult your physician when you feel ill even if you do not have fever.

BODY Temperature Mode

In BODY MODE, the icon at the left is shown on the display and temperature is adjusted to an Oral (sublingual) temperature approximation. Normal Oral temperature is typically 95.0°F to 100.7°F (35.0°C to 38.2°C) but varies by age, gender and time of day¹.

Remove Caregiver from (optional) Wall Mount if necessary

Remove protective CAP if present
Inspect Sensor and remove any debris. Clean if necessary.

Remove hair and perspiration from center forehead area.

If patient was lying face down or was wearing a hat or garment covering the skin, allow the forehead to be exposed to the air in the room for 5 minutes prior to taking reading.

Relocate patient if in drafty environment.

Aim at center forehead area 1/2” to 2” away from skin surface (1.2 to 5 cm). Be sure thermometer is perpendicular to skin surface (at right angle).

Press and release the POWER button. Hold thermometer in place until a double audio “beep” is heard and the temperature is displayed on the LCD.

Be sure BODY temperature icon is displayed. Read Temperature.

If temperature is suspected to be incorrect or display reads “LO” or “HI” consult the Troubleshooting - Error Codes Section of this manual.

Replace Sensor Cap and place in (optional) Wall Mount.
Temperature Recall

If Caregiver is powered off (blank display), press POWER. Press MEM button and hold. The date and a number from 1 to 30 will be displayed indicating the temperature number. “01” is the most recently taken temperature and “30” is the oldest. (After 30 temperatures are stored, the oldest will be deleted)

Release the MEM button and the “TIME” “Temperature” and MODE of the temperature is displayed. Example: Feb. 13, 2011 at 12:26AM, a 98.6 °F BODY mode temperature was taken.

Repeat pressing and releasing MEM to display earlier stored temperatures “02” through “30”.

Press POWER button to exit this function.

Changing °F/°C Temperature Scale

The temperature scale (Fahrenheit or Celsius) may be changed using the following procedure.
If Caregiver is powered off (blank display), press POWER.
Press the °C/°F button. The current scale is displayed.
Press the °C/°F button again to change scale. The new scale will be displayed.
Press POWER to exit this function.

SURFACE and ROOM Temperature Modes

SURFACE Temperature Mode

Surface temperature mode measures the surface temperature of an object placed within the field of view (FOV) of the thermometer. At 2” (5cm) away, the FOV is a 0.84” (2.1cm) circle (±8° cone angle FOV). Accuracy varies with the type of object being measured and the temperature of the surrounding environment.
Room temperature mode measures the temperature of the room in which the thermometer is located. Allow 20 minutes for the thermometer to adjust to abrupt changes in room temperature.

**Setting SURFACE or ROOM Modes**

If Caregiver® is powered off (blank display), press **POWER**.

Press and hold **MODE** for 5 seconds. The currently set Mode (Body, Surface or Room) will flash.

Press **MODE** repeatedly to cycle to the next mode - SURFACE/ROOM/BODY.

Press **POWER** key to exit this function and display the temperature in the desired Mode.

Caregiver will remain in the chosen Mode with each press of the POWER button until it powers off after 30 seconds. It will then revert back to BODY Mode.

**Setting Date and Time**

This setting is only necessary at initial setup and when the batteries are changed.

If Caregiver is powered off (blank display), press **POWER**.

Press and hold **SET** for 5 seconds. The currently set date will display and the “months” digits will flash.

Press **MODE** repeatedly to increase the month by 1 or press °C/°F repeatedly to decrease the month by 1.

Press **SET** to change the DAY. The “day” digits will flash.

Press **MODE** repeatedly to increase the day by 1 or press °C/°F repeatedly to decrease the day by 1.

Press **SET** to change the YEAR. The “year” digits will flash.

Press **MODE** repeatedly to increase the year by 1 or press °C/°F repeatedly to decrease the year by 1.
8. Press **SET** to change the HOURS and toggle AM/PM. The “hours” digits will flash and “AM” or “PM” will light.

9. Press **MODE** repeatedly to increase the hours by 1 or press °C/°F repeatedly to decrease the hours by 1.

10. Press **SET** to change the MINUTES. The “minutes” digits will flash.

11. Press **MODE** repeatedly to increase the minutes by 1 or press °C/°F repeatedly to decrease the minutes by 1.

12. Setting of Date and Time is complete.

**Maintenance and Cleaning**

Caregiver has no user serviceable internal parts except battery replacement.

Always replace Sensor Cap when not in use.

Store in a dry location free of dust and away from direct sunlight.

Use a soft dry cloth to clean the plastic housing or a cloth dampened with a solution of water and mild detergent. Occasionally, 70% isopropanol solution may be used.

Never submerge in liquid.

The sensor window is recessed to assist in keeping it clean and free of debris. Inspect the lens and remove any debris. Smudges may be cleaned by gently wiping the window with a small foam-tipped swab (non-linting) moistened with 70% alcohol. Wait 10 minutes prior to taking temperatures.

</table>
Calibration Adjustment Mode

This mode should be used only by qualified Bio-medical technicians. It will alter the factory calibration of Caregiver®.

The displayed temperature in SURFACE mode may be increased or decreased by an amount up to ±2°F maximum in increments of 0.1°F. This will also alter the displayed reading in BODY mode but not necessarily by the same amount.

Details on the recommended calibration interval, checking calibration and adjusting calibration are found at www.thermomedics.com in the knowledge base under calibration.

Measurement Technique

1. Remove protective Cap if present

2. Remove hair and perspiration from middle of forehead

3. Aim at middle of forehead between 1/2 inch (1.3 cm) and 2 inches (5 cm) away from skin
   (Aim perpendicular to the skin, not at an angle)

4. Press and release POWER. Wait for two “beep” sounds. Read temperature on LCD

Allow at least 20 seconds before taking the next temp
