

canopy

designed by SingYu Lam

sketches

specifications

Each fountain is 1'x1'. The shorter version stands 3' tall and the taller version stands 4' tall. The resulting stream of water shoots 4" above the surface of the fountain. Near the base of each fountain is a passive heat circulation system to regulate the temperature of the water in the pipes.

inspired by nature

inspiration

Canopy is designed to be reminiscent of the shadow patterns that dance across the forest floor. It mimics the structure and nature of its form from trees, and aims to recreate the pleasant feeling of being under the shade of a tree.

universal

Canopy is a free standing drinking fountain that is optimized to be accesible to everybody. Its two different heights allows it to be used by people of all ages and abilities. Its universal side grip design enables it to be used with either left or right hand.

clean

Canopy follows a minimal and simple design. Within seconds of looking at it, people will realize what it is and how to use it. There are no useless gimmicks and superflous aesthetics. Canopy is honest.

sustainable

Designed for both outdoor and indoor use, Canopy utilizes solar panels to collect solar energy during the day and uses it to power lights during the night. This ensures that it will always be an inviting place to visit.

friendly

Not only does Canopy provide shade during the day, but it is also a source of light at night. Its translucent plastic platforms help block out precipitation while allowing some light to stream through.

eye catcher

Canopy is simple yet elegant. It can blend into an urban backdrop but still add more to its surroundings. By providing a welcoming shelter for people 24/7, Canopy creates an atmosphere of safety. It is here where people can strike up conversations, and undoubtedly, many of them would be about the interesting design of Canopy itself.
