

EDSE Reference

“All went on absolutely smoothly without slightest problem. We did extractions in 7 hours including preparation and final packing. So we are absolutely happy.

Thank you for your support”

— Manager, Comtes FHT, Czech Republic

“We were pleased to be able to use the EDSE scoop sampling technique on our rotor and believe there is some potential for use elsewhere. Our client were very pleased with the results as we have been able to provide substantially more information on the crack mechanism than we would have been able to do with surface metallography”

— A power plant manufacturing company, UK
