

Data for Mandrake

- 1) Monitor everyone's movements by means of bugs, telephone, extrapolation program, etc. When any are in relatively close proximity (say, a matter of minutes, following their present mode of transport) notify me.
- 2) Engineer nanoagents that will:
 - a) Prey on other nanoagents.
 - b) Perpetually sharpen and harden Hopper's blade, and dissolve tissues other than his own.
 - c) Contain microfine silver and gold dust, suspending it in a solar or self-generated electrical field. As per Quincy's model.
 - d) "Sniff" the recent presence of those whose DNA codes we have (Ling Pao, Walter), indicating the estimated age of their trail by the brightness of color, strobing, etc.
 - e) Synthesize THC directly in Hopper's bloodstream. To be varied in intensity by his issuance of subvocal commands. If impossible, then subdermal time-release sacs of THC in various locations, to be burst by sharp, precise, but non-penetrating impact.
 - f) Analyze and remove any foreign devices from Kaneda's brain. Also block his addiction to methamphetamines and any other harmful drugs. Or block receptor areas for the "high" from said substances. If this upsets him, engineer agents to amplify his adrenal gland, producing a "natural high" as well as superhuman speed and agility upon receiving the bone vibration of key subvocals. Also place a transmitter receiver akin to my own in his brain, however with limited access to your database.
 - g) Nullify the subsonics from Walter & Company's "flashlights". Either by producing a field of counter-frequencies, subsonic white noise, or absorbing them.
 - h) Examine potential for increasing and focusing Claire's psychic abilities. Also that of bringing out that potential in myself and those others in the group who have shown it.
 - i) Find which party members have no psychic potential and would be willing to have those receptor sites blocked by nanoagents. Thus becoming a blank slate to psychic detection or attack.
- 3) Run extrapolative program based upon following premises, both singularly and collectively:
 - a) Assume coordination of Anulet with Rosenthal, against Li Pao and both against Walter in coord. w/ Mathers. Extrapolate

probable victor based on troop strengths, special resources (psychics, nerve gas, IR death rays, nanos, etc.).

- 4) Run anomaly-seeking program on following data groupings:
- a) Present and 27th century histories of JFK assassination (attempt), looking for the key players/times/coincidences which differ between the two. Follow this with an extrapolative verification that these specific events do account for discrepancies.
